

FLY

Lounge Chair

FLY

"FLY" is an infinite non-circular decimal number,
and after digitally modeling it into a visualization video,
you will get an infinitely converging circle. Using this as a starting point,
the design of a sofa chair called " π " represents mankind's pursuit of infinite
perfection.

T

The "FLY"

series lounge sofa chair is a perfect blend of comfort and sophistication. Its semi-enclosed contour and spacious inner space provide enough support for different sitting positions. The streamlined silhouette and stitching details are designed to satisfy the need for comfort while also taking into account the visual experience. By combining with different fabrics and support frames, it will present an unexpected and different visual experience in different styles of spaces.
